Soil Solution

Stubble Digestion Study

DeltAg Soil Solution is designed to aid soils in the breakdown of old crop residue and to improve aeration. **Soil Solution** has been shown to be beneficial when soil pH is acid (low) and/or when lime is not available. **Soil Solution** is formulated with a blend of micro-nutrients, designed to enhance microbial activity which aids in digestion of post harvest residue; the result of which is **healthier soils for better support of plant growth.**

Application Directions: **Soil Solution** may be applied broadcast before your crop is planted. For best results, apply at a rate of 24 Oz/acre and incorporate into the soil.

In no-till situations, or after the crop has been planted, apply 32 ounces per acre of **Soil Solution** anticipating rain for incorporation into the soil.

Always apply in enough water for ample coverage (5 to 10 gallons total).

Small Gardens and Pot Plants: **Soil Solution** may be applied by diluting two ounces per gallon of water. Mist onto soil surface and apply more water to activate.

DeltAg Soil Solution Liquid Concentrate is available in a 32 Ounce Bottles, six (6) per case or 2.5 X 2 (5 Gal).
